Fahad Bedaiwi

Electrical & Production Engineer | Project Delivery | Industrial Systems | Commissioning & Operations | Driving Reliability & Performance | SCE Certified

Al Khobar, Eastern, Saudi Arabia

Summary

Electrical & Production Engineer with hands-on experience across industrial production, project delivery, commissioning, and field engineering within large-scale manufacturing and Oil & Gas environments. I work at the intersection of engineering and operations — supporting production execution, coordinating with cross-functional teams, tracking progress, improving workflows, and contributing to reliable operational performance. My experience includes shipbuilding and offshore project operations, contractor coordination, manpower planning, daily and weekly reporting, technical troubleshooting, and field engineering across approximately 40 onshore rig jobs while maintaining over 98% downhole data reliability. I focus on structured problem-solving, operational continuity, and practical engineering solutions that support productivity, safety, and successful project delivery. Areas of interest: Production Engineering • Project Delivery • Operations • Commissioning • Continuous Improvement

Experience

International Maritime Industries

Production Engineer

July 2024 - Present (2 years 1 month)

Ras Al Khair

Working within large-scale shipbuilding and offshore construction operations, supporting production execution, operational planning, and cross-functional coordination across production-critical environments.

Key responsibilities and contributions:

- Coordinate production execution across Zone C, covering 9 production shops, including Flat Block Assembly activities.
- Collaborate with Safety, Procurement, Asset Management, Project Management, contractors, and operations teams to ensure production continuity.

- Monitor daily and weekly production progress, manpower utilization, workflow performance, and operational constraints.
- Support production planning, contractor coordination, resource allocation, and operational readiness.
- Identify production bottlenecks, coordinate corrective actions, and contribute to continuous workflow improvement.
- Prepare production reports and operational updates to support planning, performance tracking, and management decision-making.
- Maintain compliance with HSE requirements, quality standards, and project priorities while supporting on-time production delivery.

NESR

Electrical Engineer

July 2023 - June 2024 (1 year)

Dammam

Supported field engineering and Measurement While Drilling (MWD) operations across approximately 40 onshore rig jobs, ensuring reliable system performance in demanding operational environments.

Key responsibilities and contributions:

- Installed, calibrated, tested, and troubleshot MWD tools and field electrical systems.
- Maintained over 98% downhole data transmission reliability through calibration, system validation, and real-time troubleshooting.
- Diagnosed communication faults, sensor failures, and system performance issues while minimizing operational downtime.
- Monitored real-time drilling data to support operational decisions and drilling performance optimization.
- Supported programming, configuration, and maintenance activities for MWD tools, embedded systems, and field equipment.
- Prepared technical reports, calibration records, maintenance documentation, and corrective action reports.
- Worked closely with drilling crews, field engineers, and technical support teams to ensure reliable job execution while maintaining full HSE compliance.

Toyo Tires

1 year 9 months

Electrical Engineer

February 2022 - April 2023 (1 year 3 months)

Franklin, KY

Supported electrical maintenance activities within a high-volume manufacturing environment while ensuring equipment reliability and operational continuity.

- Supported electrical maintenance and daily production operations within a manufacturing environment.
- Assisted in troubleshooting electrical equipment and production-related issues.
- Performed routine inspections to support equipment reliability and operational continuity.
- Worked closely with production and maintenance teams to support daily operational activities.
- Followed safety procedures and quality standards while performing assigned tasks.
- Assisted in preventive maintenance activities to minimize equipment downtime.

BIM operator

August 2021 - February 2022 (7 months)

Franklin, KY

Supported engineering documentation and technical drawing activities within a manufacturing project environment.

- Assisted in preparing and updating engineering models and technical drawings.
- Supported project documentation and engineering coordination activities.
- Maintained drawing revisions and engineering records.
- Collaborated with engineering teams to ensure drawing accuracy and project consistency.
- Assisted in reviewing project documentation and design updates.
- Maintained organized engineering files and documentation.

Education

Western Kentucky University

Minor, Systems Engineering · (January 2015 - May 2021)

Western Kentucky University

Bachelor's degree, electrical engineering · (2015 - 2021)
